

## How Are People Thinking Healthwise?

- 1) Having a Personal, own problem I guess  
Brings many peoples normal life to total stillness  
They have many a **thought** and feeling of strain  
That totally gets on top of them time and time again
  
- 2) Via true care and understanding shown by a loyal friend  
Most of this would come quite comfortably to an **end**  
Whilst circumstances having given it a '**title**' or a '**name**'  
Makes it re-occur in the sufferers **mind** time and time again
  
- 3) If you wonder what could be quite a disturbing name  
It is Doctor, used time and again  
Or people with a relationship title such as Father and Mother  
Being used time and again rather than any other
  
- 4) If you wonder what I mean by an in-descriptive title being wrongly used  
I mean such as just Mental, Epilepsy, Diabetes, making people confused  
Other than Professionals giving people's problem an un-explicit name  
**Health Consultants** should always say '**Health problem called...**' time and time again
  
- 5) Rather than the silly name such as 'Doctor' said to you and me  
'**Health Consultant** a much more natural name especially would be  
Rather than Mental, Epilepsy, or Diabetes etc. just being used  
**Health problem called...** is a much more natural title to all the time be used
